3.Implementation.

4.Difficulties and Overcomes.

5.Future Plans.

6Conclusion.

7.Academic Progresses.

OBJECTIVE

The name of the game is inspired by the English word Maestro, which means performer of classical music or Guru. After completing each stage of the game, our hero is one step closer to facing his destiny. Here the hero, Romo, fights with Cutter Maruf and tries to remove darkness from the realm of Westeros and become the Mystro.

Introduction:

Team Mystro tried their very best to create a game that will give a better time to any age of people playing it.

Our intention is to make a graphically amazing fighting game that will be both awesome and challenging to play.

Hero will face difficulties while taking down some of the villains cause we coded the bots that way. Every ages of peoples can relate to this game.

Implementation:

- To build this game we used C++ programming language, Visual Studio IDE, Igraphics as the game engine. We also used Adobe Photoshop and Adobe Illustrator for cutting the characters and other graphical works.
- We used BMP format images for the characters, PNG format for other backgrounds, and button images.
- We used at least 3 to 12 pics for every movement of the bot and the main character.
- We have taken some materials from the internet.
- In the game, we used the iDraw() function for displaying the images, and iMouse() for selecting an individual property.
- We used different gamestate values to show the exact thing we had to show in our game display.
- At some points, we had given the user of the access to some keys on the keyboard.

Difficulties and Overcomes:

- We had to download and import the latest version of Igraphics files because the older version was not working on our devices and could not act properly with all the functions we need.
- The iShowImage() and iLoadImage() functions were not working in some devices. For that we had to use iShowBMP() and iShowBMP2() functions. But to use these functions, we had to convert the images into BMP and set the background of the images to pure Black(000000) and pure Red(FF0000).
- When we needed to remove the black or red background, we could not do that using iShowBMP(). So we used the iShowBMP2 function.
- Controlling the with respect to our hero was also a very difficult task to overcome as we had to move the bot both forward and backward direction.
- When we used iSetTimer() and rand() functions for showing the images of the bot, the movement was a bit delayed or too fast sometimes. We handled that but still need some improvement.
- While showing the high score or comparing a player's previous game history, we faced the problem of reading the exact values from the files. Besides we had to compare every result with previous high score info and update the output if needed. Then we had to rewrite the file according to the input. We faced a lot of difficulties while executing this method.

Future Plans:

* We have a plan to enlarge the game.

* We will add 3 maps, each map will contain 5 levels, each harder than the previous one.

* Every map will concentrate on one individual Main Boss.

* One cannot fight the main boss of that map without gaining a certain amount of points.

* We will add some weapons to the Menu interface so that users can change weapons according to their needs.

* We will give both hero and bot a special power which will activate after a certain time.

Conclusion:

It was an awesome journey of knowing nothing and then creating a game like this. We hope everybody will enjoy this game as much as we enjoy it while creating. And wait for the updated version to come.

Academic Progress :

The project

- Improved the basic knowledge of C++ language.
- In problem solving process the confusions were cleared evenly.
- We learnt the basic Igraphics features in C++.
- We also creatively learnt to use Visual Studio.
- The concept of gaming processes and graphics became strong etc.

Hopefully in future we will be able to present a great gaming project using C++ with the help of the knowledge we have gained.

Thank you.

THE END
